PROOF OF THE EXISTENCE OF GOD FROM MOTION (THE KINETIC PROOF)

*(followed by: **TOWARDS THE SOURCES OF THE MODERN RELATIVISM OF VALUES**)*

Contents

PREFACE

1. The reason for demonstrating the existence of God nowadays 4
2. The form of the proof of the existence of God 9
3. The significance of the term “demonstration” 11
4. The scientific status of the proof of the existence of God. 16
5. The name of God 19
6. Man’s natural desire to know God 24
7. Fernand’s van Steenberghen assessment of the validity of the kinetic proof by St. Thomas Aquinas 38

8. The Word of God and human words 43

CHAPTER I. METHOD

1. Scientia subalternata (the subordinate science) 47
2. The order and system of sciences 51

CHAPTER II. MODERN EUROPEAN SCIENCE AND ARISTOTELIANISM

1. The mathematical paradigm of science versus Aristotelianism and philosophy . 61
2. The laws of Nature 81
3. Values 102
Christian values 117

CHAPTER III. MATHEMATICS 121

1. Are natural processes reversible? 122
2. The mathematical abstraction 138
3. Number *e* 151
4. Mathematics and experiment 158

CHAPTER IV. RELATIONS

1. Analogy: the order of relations. 166
2. The principles of things are contrary (principia contraria sunt) . . . 170
3. The problem of relativism 171
   3. 1. Cognoscibility and relativity of nature 172
   3. 2. Towards relativism 175
   3. 3. Homo mensura 195
4. The starting point of science 208
5. Facts and being-naturally-related. The language of being-naturally-related . 217
6. Analogy: the relation of the judgment to the spoken and to causes . . 235
7. The existential judgment and the identity principle.
   The fundamental option and the causal relations.The cultural and final identity. 245
8. The problem of the ontological proof 268
9. The spiritual relation of paternity. Matrices of cognition.
   Their disconnection from reality 277
10. The analogy of proportionality animating the progress of science.
   The “supernatural” “consciousness” hindering it 289

11. The cognitive relation. The a-locality of cognition 301

CHAPTER V. MEASURING MOTION

1. The beginning in time. Numerus numerans and numerus numeratus . 312
2. Aesthesis – perception 326
3. Perceiving and Reflecting 333
Reflexing and reflecting 340
4. The problem of the absolute measure of things and the sensual perception . 347
5. The extent to which the geometrical optics can be applied . . . 359
Various sense data (phenomena) stem from the same definite source – the substance 366
6. The superposition of wave courses and the borders of the experiment . . 367
7. The problem of the natural place 372
8. Time 382
9. The fullness of being and the formalism of mathematics. The problem of Kantianism 391
10. Experiencing God's absence 411

CHAPTER VI. FORMALIZATION OF CONCEPTS

1. Mechanistic philosophy versus the language of qualities 415
2. The quality of truth and the scientific truths 426
3. Definitions and signs 435
4. Intentionality of nature and the maximum of freedom and creativity . . 446

CHAPTER VII. DIVERSITY OF BEINGS

1. The separability of objects in science 452
2. The intentionality and complementarity 469
3. Between the measurable and unmeasurable 478
4. A non-physical interpretation of the principle of complementarity . . 481

5. Holism 483
6. Evolution 491

CHAPTER VIII. COGNITIO CONFUSA

1. The subject matter and the starting point of science 497
2. Cognitio confusa 506
3. The hidden variable. Forma totius. Species 514
4. The lambda variable 517

CHAPTER IX. INTENTIO NATURAE 520

1. The historical background of the problem 521
2. The animal perception 527
3. The nature of perception 532
4. The effect of the sensual perception 534
5. The cosmos 544
6. The natural desire 552
7. The barrier of potential 560
8. The asymmetry of nature 565
9. The nature of bodies 569
10. ἀντιπερίστασις 575

CHAPTER X. BEING TOWARDS THE PLENITUDE OF BEING. CONCLUSION 600

1. Being 604
2. The problem of the existence of God formulated in terms of classical philosophy 611
3. χωρισμός 623
